

We at QIS Solarwise know the importance of providing eco-friendly insulation for you and your family, and that's why we provide wool and polyester batts for both thermal and acoustic protection. Either do-it-yourself and save, or have our fully trained staff install the batts for you – it's your choice.

Our polyester, wool and polyester foil batts are also *guaranteed for the life of your home.*

Polyester Batts

Polyester has long been used in clothing and bedding to provide warmth and protection against the elements.

Solarwise Polyester Batts utilise the same principles to keep the heat within your home in winter and stop the heat penetrating your ceiling and walls in summer.

Made from 100% polyester, our batts are easy to handle, soft to touch and won't irritate the skin – making them a great form of insulation to install yourself or if you require easy access to material or objects within your ceiling.

Our polyester batts are manufactured to the Australian Standard for thermal insulation AS2627 and achieve the highest rating when tested to the Australian Standard for Fire Safety AS1530. The batts are also insect proof and will not harbour keratin eating insects.

Wool Blend Batts

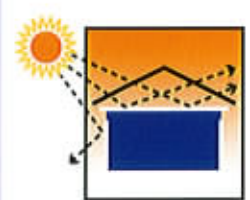

Wool is a natural fibre which works efficiently to trap large columns of air and provide high resistance to heat flow. It has been used as insulation in Europe since as early as the Eighteenth century.

Like most wool batts on the market today, our batts are made from a blend of wool and polyester, making them safe as well as user friendly. When installed properly, the batts will fit snugly between the joists within a ceiling and will not flatten over time.

Natural minerals and salts have been added to the wool to ensure they are both fire resistant and insect and vermin proof and the batts consistently pass the Australian Standards for fire and thermal ratings.

R-Value (Thermal Performance)	Application/ Use	Sizes
R 1.5 Wall Batts	For standard wall insulation	430mm and 580mm wide
R 2.0 Wall Batts	For optimum wall insulation	430mm and 580mm wide
R 2.0 Ceiling Batts	Minimum rating for ceilings	430mm and 580mm wide
R 2.5 Ceiling Batts	Suitable for coastal climates	430mm and 580mm wide
R 3.0 Ceiling Batts	Recommended for colder climate conditions	430mm and 580mm wide
R 3.5 Ceiling Batts	Designed for extra performance	430mm and 580mm wide

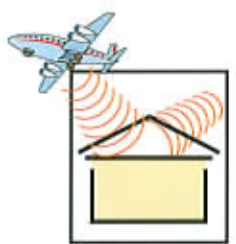

Note: In order to maximise the effectiveness of wool and polyester insulation we advise installing ventilation to minimise heat retention. Please ask your representative for information on roof ventilation methods and other ways to get the most out of your insulation.

Deflects the summer heat

Contains internal heat in winter

Cuts external noise
